Singapore, May 29, 2024

# Hydrogen Activities in the Asian Region

**Prof. Jinyang Zheng**

**Director of Zhejiang University Hydrogen Energy Institute**

**Convenor of ISO/TC197/SC1/AHG 2 H<sub>2</sub> and high H<sub>2</sub> content blends pipelines**

# Contents

- 1 Update on activities in the Asian region**
- 2 Current work of ISO/TC197/SC1 on hydrogen pipelines**

# Update on activities in the region

## 1. China: Policies

中华人民共和国国家发展和改革委员会  
National Development and Reform Commission

### Guidelines on promoting the green innovation and high-quality development of the oil refining industry, 2023

- Promote the integrated development of the oil refining industry and renewable energy, and encourage enterprises to vigorously develop hydrogen production from renewable energy.
- **Support the construction of demonstration projects for green hydrogen refining, promote the replacement of green hydrogen, and gradually reduce the amount of hydrogen produced from coal in the industry.**
- Encourage strengthening the selectivity of hydrogenation process, implement the integration and optimization of hydrogen network system, and reduce the carbon emissions of hydrogen production units.

### Implementation Plan for Green and Low Carbon Advanced Technology Demonstration Project

- **Low-cost (off grid, interruptible load) renewable energy hydrogen production demonstration;**
- **advanced safe and low-cost hydrogen storage, transportation equipment research and development, manufacturing, and demonstration application;**
- Hydrogen fuel cell research and development, manufacturing, and large-scale demonstration application;
- Pure burning and mixed burning hydrogen gas turbines research and development, manufacturing, and demonstration application;
- Hydrogen electric coupling demonstration application, etc.

## *Update on activities in the region*

### **1. China: R&D**

**中华人民共和国科学技术部**

Ministry of Science and Technology of the People's Republic of China

**The Ministry of Science and Technology (MOST) continue to strengthen research and strive for key breakthroughs in hydrogen energy and fuel cell technology, so as to provide strong technical support for the development of China's fuel cell commercial vehicle industry. In 2023, MOST launched 19 projects and subsidized 340 million yuan.**

- **Green hydrogen production and scale transfer system**
- **Safe storage and rapid transmission and distribution system**
- **Convenient hydrogen upgrading and efficient power system**

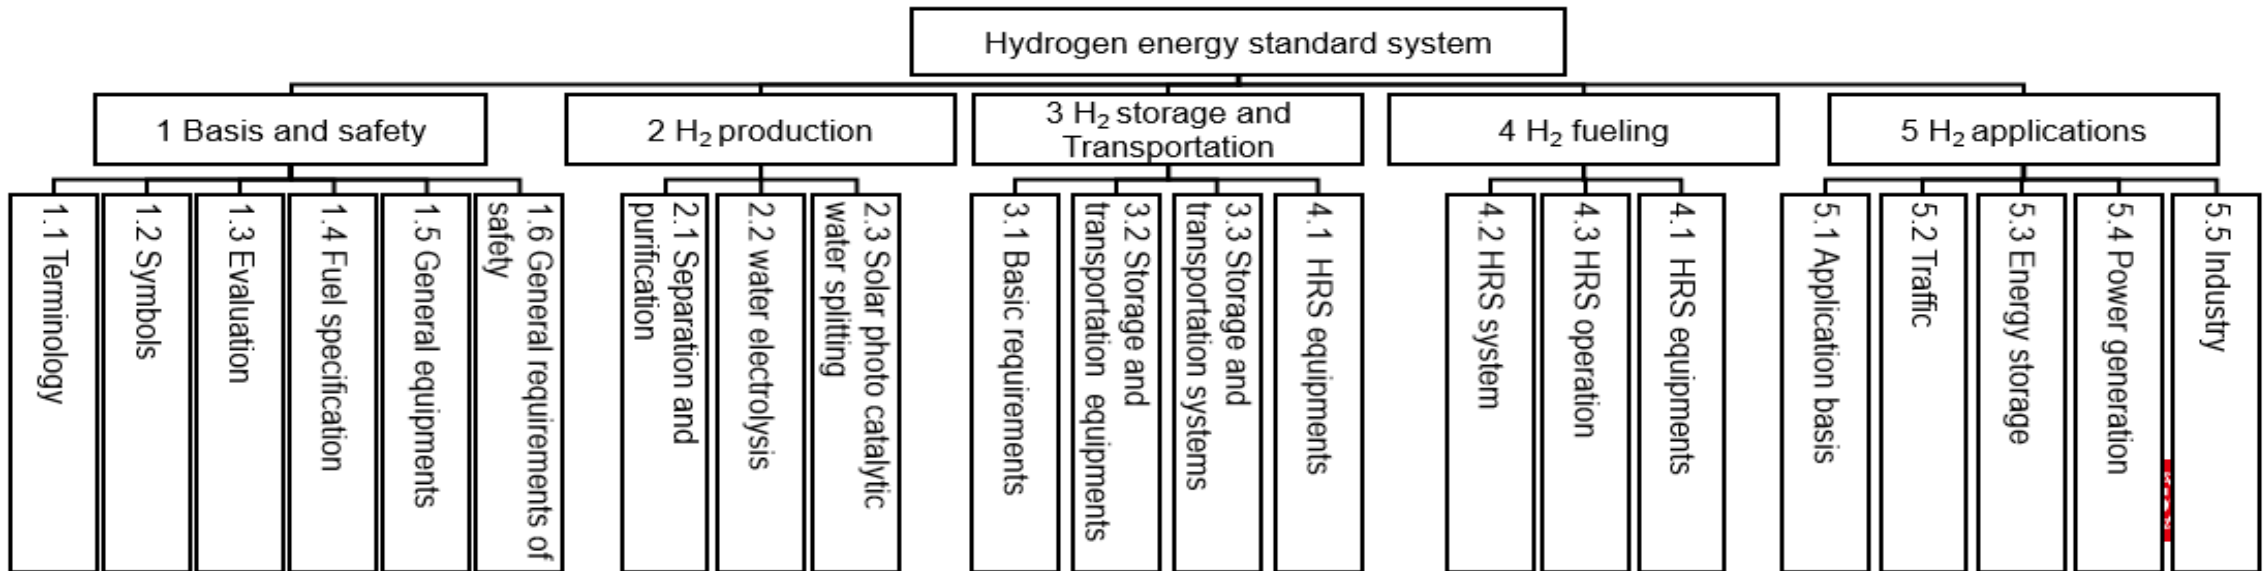

# Update on activities in the region

## 1. China: Standards

### Guidelines for the Construction of Hydrogen Energy Standard System, 2023

The hydrogen energy standard system includes **five sub-systems: basis and safety, hydrogen production, storage and transportation, fueling, and application**. According to technology, equipment, system, safety and testing, 20 secondary sub-systems and 69 tertiary sub-systems have been constructed. **There will be 145 national standards and 13 industrial standards . Among them, about 112 are in use, the others will be prepared and published in the next three years.**

## Update on activities in the region

### 10 National H<sub>2</sub> Standards published in 2023

#### Hydrogen compatibility

- **GB/T 42610-2023** Test method for evaluating **hydrogen compatibility of plastic liner of high pressure gaseous hydrogen cylinders**

#### Hydrogen cylinder

- **GB/T 42612-2023** Fully-wrapped carbon fiber reinforced **cylinders with a plastic liner** for the on-board storage of compressed hydrogen as a fuel for land vehicles
- **GB/T 42626-2023** Periodic inspection and evaluation of fully wrapped fiber reinforced **composite gas cylinders of compressed hydrogen** gas for automotive vehicles

#### Valve

- **GB/T 42536-2023** **Assembly valve** on high pressure hydrogen storage cylinder for vehicles
- **GB/T 42177-2022** Technical requirements and test methods for **gaseous hydrogen valves** used in hydrogen fueling stations(adoption of ISO 19880-3)

#### Hydrogen safety

- **GB/T 29729-2022** **Essential requirements for the safety of hydrogen systems**(refer to ISO/TR 15916)

## Update on activities in the region

### Fueling protocols

- **GB/T 42855-2023 Technical requirements of fueling protocols** for hydrogen fuel cell vehicles

### Hydrogen purification

- **GB/T 42857-2023** Safety of **pressure swing adsorption** systems for hydrogen purification(adoption of ISO/TS 19883)

### Hydrogen refueling station

- **GB/T43674-2024 General requirements of hydrogen fueling stations** (adoption of ISO 19880-1)

### Hydrogen Pipelines (Under Development)

- Technical requirements for **hydrogen delivery system**
- **Hydrogen Transmission Pipelines**
- Test method for **hydrogen compatibility of welded joints** of hydrogen pipelines
- **Method for evaluation of repurposing natural gas pipeline** for transportation of hydrogen blended natural gas

# Update on activities in the region

## 1. China: Applications (HRS and FCVs)

 total **417** only **262** in operation

# Update on activities in the region

## 1. China: Applications (Pilot Projects)

### Sinopec Xinjiang Kuqa Green Hydrogen Pilot Project

China Petroleum & Chemical Corporation announced that **the Green Hydrogen Pilot Project entered into commercial operation**. The Project takes advantage of the wealth of photovoltaic resources in Kuqa to achieve **20,000 tons per annum** of green hydrogen by using solar power to electrolyze water, along with the capacity to store **210,000m<sup>3</sup>** of hydrogen and transport **28,000m<sup>3</sup>** per hour.

The Project supplies hydrogen to Sinopec's Tahe Refining & Chemical to remove its fossil fuel-based electricity used for hydrogen production, which is expected to help it reduce 485,000 tons of carbon dioxide emissions annually.

## *Update on activities in the region*

### **1. China: Applications (Demonstration project)**

#### **Ningbo Cixi hydrogen-electricity coupling DC micro-grid demonstration project**

---

- Hydrogen-Electricity-Heat combined energy system: hydrogen production ~100 kg /d, heat ~ 120 kW/d
- 4MW solar photovoltaic power, 0.2MW wind power
- 400kW water electrolyze, 10 DC charge for EV
- 3MWh energy storage battery and 240kW fuel cell
- The project can support the operation of the grid when the grid is urgently needed

# Update on activities in the region

## 2. Japan: Policies

2017 Japanese government released its Basic Hydrogen Strategy, **the world's first national hydrogen strategy.**

2023 It was revised with a goal: **\$3/kg by 2030 & less than \$2/kg by 2050.**

Three new features of the refreshed strategy:

- **New targets** Hydrogen production: 12 million tons per annum by 2040 / Electrolysis: a 10% for Japanese companies' share);
- **A “pathway” to low-carbon hydrogen** aiming for 3.4kg of CO<sub>2</sub> emissions or less for 1kg of hydrogen produced;
- **Strengthening industrial competitiveness** JPY 15 trillion Public-Private investment for H<sub>2</sub> supply chain next 15 years; Prioritizing nine strategic areas(Electrolysis, Hydrogen Supply Chain, Fuel Cells, Power Generation, etc.)

**「水素基本戦略」の改定**

水素基本戦略（アンモニア等を含む）について、以下を骨格とした改定の検討を進め、5月末を目途に取りまとめ、制度設計の具体化を図る。

<主なポイント>

- ① **2040年における水素等の野心的な導入量目標を新たに設定し、水素社会の実現を加速化**  
～2030年300万トンより先の目標として、水素需要ポテンシャルの見直し等から、**2040年1200万トン**を軸に検討～
- ② **2030年の国内外における日本企業関連の水電解装置の導入目標を設定し、水素生産基盤を確立**  
～2030年の世界の水電解装置の導入見通しの約1割に当たる、**15GW**程度を軸に検討～
- ③ **大規模かつ強靱なサプライチェーン構築、拠点形成に向けた支援制度を整備**  
～2030年頃の商用開始に向けて、大規模かつ強靱な水素・アンモニアサプライチェーンの早期構築を目指す。現時点で、官民合わせて**15兆円**以上のサプライチェーンの投資計画を検討中～
- ④ **「グリーン水素」の世界基準を日本がリードして策定し、グリーン水素への移行を明確化**  
～水素の製造源ではなく、**炭素集約度**で評価する基準の策定、グリーン水素へ移行するための規制の整備～

事業者等から挙げられた課題：①水素社会実現への投資に向け見込可能性を高めるための目標の提示や政府支援（水素や水電解装置等の導入目標、水素関連製品の製造設備投資への支援）、②特に、国内外の大規模水素製造や輸送に関するインフラ構築・製造輸送に要するコストへの支援、③水素の利用に繋がる規制・支援一体型での包括的な制度整備、④資源国との関係強化、⑤水素バイパスにまたがる適用法令の明確化、⑥水電解装置に対する安全基準等の合理化、⑦地域での水素製造・利用、自治体連携等

**「水素産業戦略」の策定**

①脱炭素、②エネルギー安定供給、③経済成長の「一石三鳥」を狙い、日本の技術的な強みを生かし、世界展開を図る。

**生産** 水電解装置の生産設備増強、水電解装置等のコア技術の開発支援

**輸送** 輸送設備の国内生産設備増強・人材育成、液化水素・MCHの海外普及（欧州等へのアップセル）、水素等品質規格の標準化

**利用** FC（燃料電池）適用車導入、水素STのマルチ化、港湾や空港でのFC機器導入、発電技術の開発、国内外への普及促進、熱電発電機の導入促進

**「水素保安戦略」の策定**

大規模な水素利用に向け、サプライチェーン全体をカバーした法令の適用関係を合理化・適正化を図る。

①水素の安全性を裏付ける科学的データ等の戦略的獲得  
②共有領域等に関するデータ等の共有  
③技術基準の統一の運用を通じたスムーズな保安規制の構築  
④第三者機関の活用（水素のノウハウ・経験を集約した中核拠点）  
⑤人材育成・大学等の活用等（リカレント教育等による水素保安の人材の確保）

**規制・支援一体型での包括的な制度整備**

**支援** 大規模なサプライチェーン構築（既存燃料と価格差を埋め）、不安供給（Energy Security）：国内製造、供給源の多角化等調達上でのリスク削減、経済性（Economic Efficiency）：供給事業者の経済的な自立化見直し、環境性（Environment）：CO<sub>2</sub>削減度合いを以て評価

**規制** グリーン水素（Environment）への移行と適用法令の整理・明確化  
・グリーン水素を定義するとともに、今後の技術の進捗や産業動向等を踏まえ、黎明期における水素の導入拡大を担い、いかにコスト削減しつつ、国内で供給される水素を中長期的にグリーン化していただく誘導措置を検討する。  
・現行の保安を含む適用法令間の関係を整理・明確化

**水素の安全な（Safety）利活用に向けた環境の整備**  
・大規模な水素利活用に向けて必要な保安規制の合理化・適正化を図る。

- 再エネ電気、石炭・天然ガスなど**あらゆる資源**から製造できる。**資源の調達先を多様化**。
- 燃えるときに排ガスやCO<sub>2</sub>は出さず、**出るのは水だけ**。そのため**環境にやさしい**。（燃料電池自動車、発電、製鉄等の産業部門など、**幅広い分野で利用可能**）
- 日本の特許出願件数は**世界一**であり、**技術力で世界をリード**。他方、課題は**コスト**。

**製造** → **輸送・貯蔵** → **利用**

**国内再生可能エネルギー**  
FHR  
太陽光発電で作った電気を  
用いた水素製造の実証

**水素ステーションの  
整備支援**

**燃料電池自動車の導入支援**  
運輸分野

**燃料電池の導入支援**  
民生分野

**海外からの水素輸入**  
豪州の石炭や  
ブルネイの天然ガスを用いた  
水素製造・  
日本への海上輸送の実証

**水素発電の検討**  
発電分野

**産業プロセスでの水素利用・技術開発**  
産業  
製鉄プロセスにおける水素利用

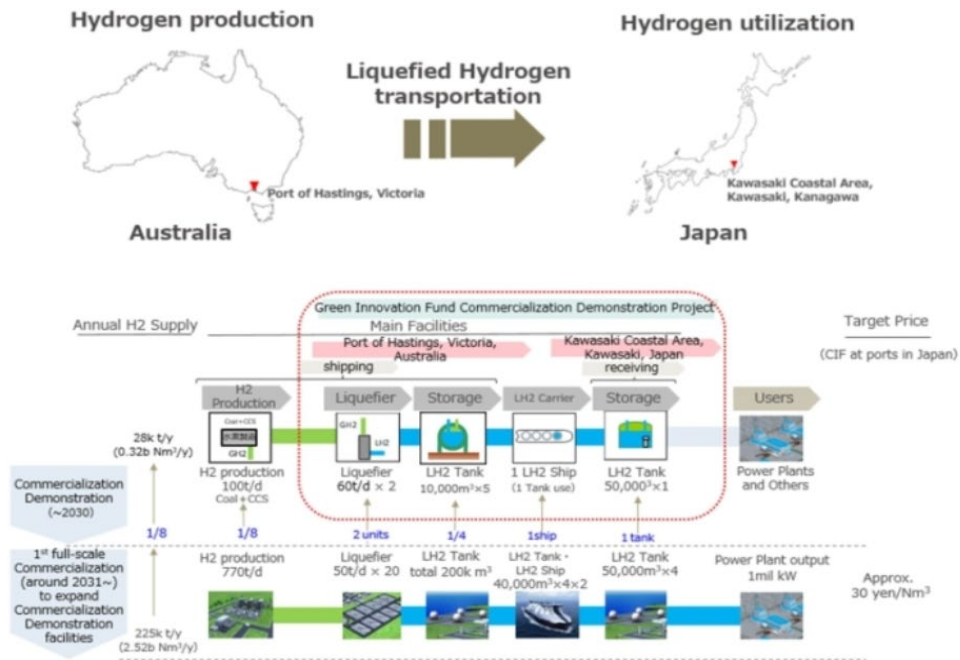

出典：川崎重工業

# Update on activities in the region

## 2. Japan: Liquefied Hydrogen Supply Chain Commercialization Demonstration

The project is to establish marine transportation technologies of liquefied clean hydrogen, aiming to achieve the Japanese Government's objective of a hydrogen supply cost of 30 JPY/Nm<sup>3</sup> in 2030 at the point of arrival in Japan.

### Liquefied hydrogen tanks for marine transportation

A vacuum insulated double-walled structure provides ultimate insulation properties. Using glass fiber reinforced plastic (GFRP) for the support structure enables heat transfer to be reduced.

# Update on activities in the region

## 2. Japan: Applications

Current status (as of Feb.2023)

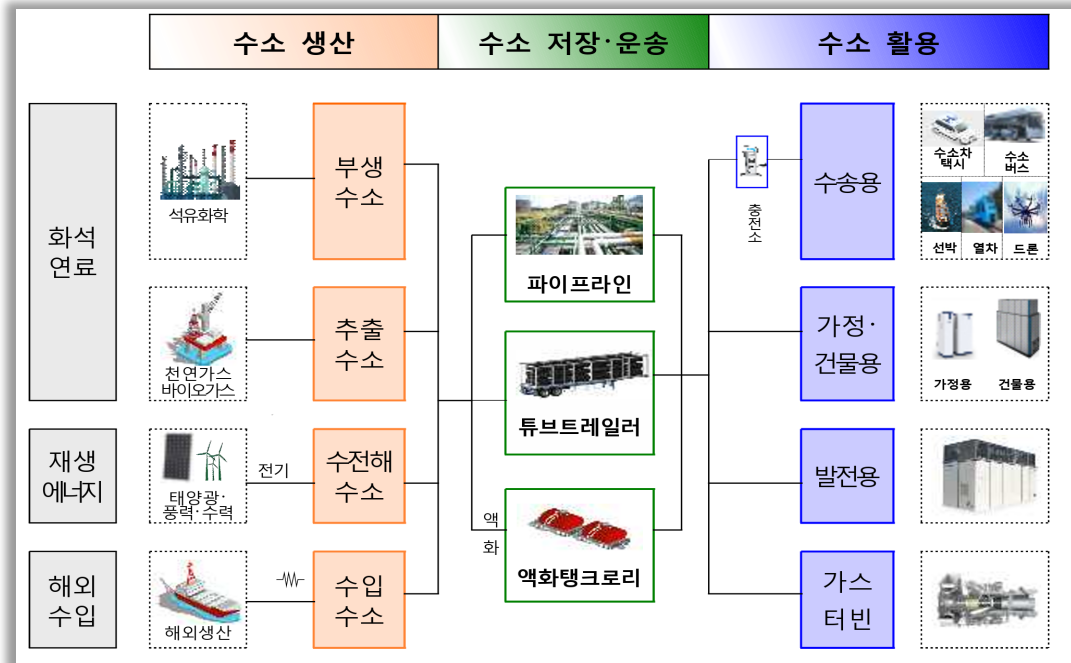

<b>Stationary Fuel Cell</b>	<b>480,373(Mar. 2023)</b>
<b>Mobility</b>	
<b>Passenger Vehicles</b>	<b>7692</b>
<b>Fuel Cell Buses</b>	<b>132</b>

## 3. South Korean: Policies

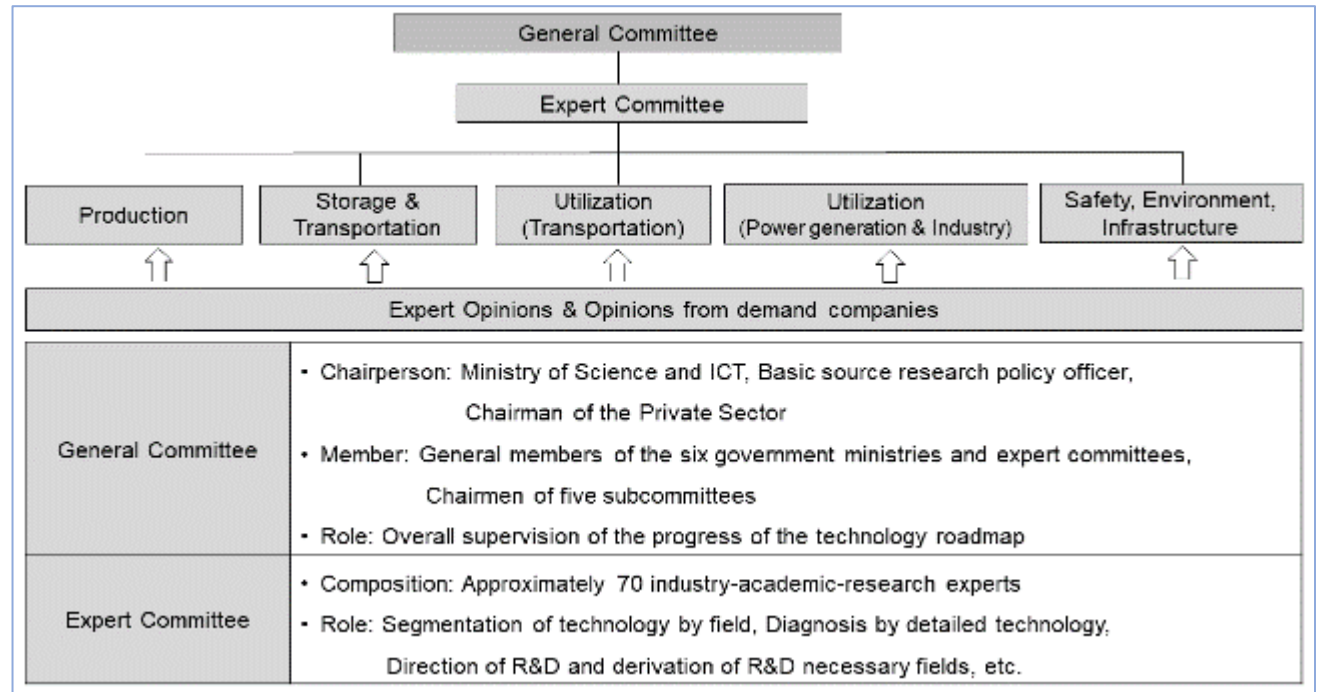

**2019** **Hydrogen Economy Roadmap and Ulsan's Future Energy Strategy**, South Korean's first strategy, released;  
**2020** National Assembly passed the Hydrogen Economy Promotion And Hydrogen Safety Management Act (**Hydrogen Act**), was the world's first national hydrogen law.

구분	2018년	2022년	2040년	
활용	수소차	1.8천대 (0.9천대)	8.1만대 (6.7만대)	620만대 (290만대)
	승용차	1.8천대 (0.9천대)	7.9만대 (6.5만대)	590만대 (275만대)
	버스	2대	2천대	6만대 (4만대)
	택시	-	-	12만대 (8만대)
	트럭	-	10톤 트럭	12만대 (3만대)
	수소충전소	14개소 (1,000만원/kg)	310개소	1,200개소
에너지	연료전지			
	발전용	307MW	1.5GW (1.6GW)	15GW (8GW)
	가정·건물용	7MW	50MW	2.1GW
수소공급	수소공급량	13만톤/년	47만톤/년	526만톤/년
	생산방식	화석연료 기반 부생수소 추출수소	수요저 연구 대규모 생산	수전해 수소 대용량 장기 저장 기술개발
수소가격	-	6,000원/kg (現 휘발유의 50%)	4,000원/kg	3,000원/kg

# Update on activities in the region

2023 Korean government deliberated and passed “The List of Critical and Emerging Technologies (draft),” officially confirming the selection of “12 Critical and Emerging Technologies.” Hydrogen is one of them.

## Update on activities in the region

### 3. South Korean: Applications (Demonstration project)

**Comprehensive ecosystem of the clean hydrogen lifecycle spanning production, transportation, and utilization (Jeju Island, The Ministry of Trade, Industry, and Energy)**

---

- **Seawater electrolysis demonstration project** connected with renewable energy, approximately 200kg of hydrogen is produced daily. Plans are underway to augment daily hydrogen production to up to 1 t.
- Increasing the number of refueling stations to five (currently one) by 2025
- Deploying 300 hydrogen buses (currently nine) by 2030
- Continuously strengthen policy support
- The project can support the operation of the grid when the grid is urgently needed

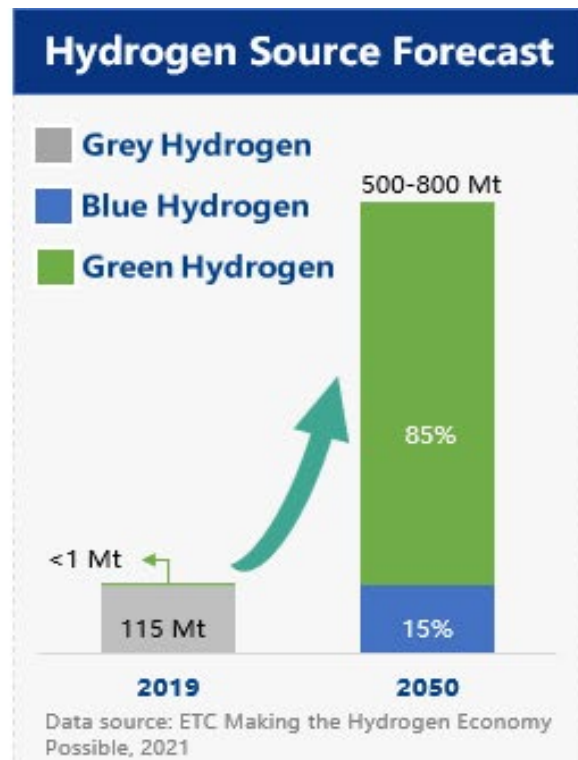

# Contents

- 1 Update on activities in the Asian region**
- 2 Current work of ISO/TC197/SC1 on hydrogen pipelines**

# A hydrogen pipeline network ultimately needed to meet a net-zero emission goal

- Delivering hydrogen to widely scattered facilities—such as power plants, industrial sites, and vehicular fuel distribution hubs—**require the development of an expansive hydrogen pipeline network.**
- **Pipeline is the most energy-efficient way for large scale (>kt/day), long distance (>1000 km), and long duration (15~30 years) hydrogen supply.** Hydrogen delivery by pipeline is an integral part of hydrogen energy strategies of countries like USA, Europe, and China.

Pure hydrogen pipeline

Blending hydrogen into natural gas

# Hydrogen pipelines in USA

As of December 2020, there were **1,608 miles of active hydrogen pipeline** in the United States. Over 90% of these pipelines are located along the Gulf, primarily serving refineries and ammonia plants in the region.

Hydrogen production units and pipelines for hydrogen and natural gas in the US (hydrogen pipeline in black)

Data source: NREL

Organization	Time	Research content
NASA	1969	Effects of high pressure hydrogen on metals at ambient temperature

NREL	2010	Blending Hydrogen into Natural Gas Pipeline Networks
US DOE	2017~	<b>H2@Scale:</b> advance affordable hydrogen production, transport, storage, and utilization to enable decarbonization and revenue opportunities across multiple sectors
Sandia National Labs	2018~	<b>H-Mat:</b> focuses on understanding the effects of hydrogen on the performance of polymers and metals used in hydrogen infrastructure and storage
NREL	2021~	<b>HyBlend:</b> aims to address technical barriers to blending hydrogen in natural gas pipelines

# Europe hydrogen backbone

Plans for the expansion of hydrogen that have been developed in Europe highlight the need for use of existing pipeline infrastructure to make substantial progress in a reasonable timeframe.

## European Hydrogen Backbone

### 2030: 5 hydrogen corridors

- Corridor A: North Africa & Southern Europe
- Corridor B: Southwest Europe & North Africa
- Corridor C: North Sea
- Corridor D: Nordic and Baltic regions
- Corridor E: East and South-East Europe

	1.4	1.5	1.8
New pipeline	2.0	2.2	
	2.5	2.7	
	3.4	3.6	
	4.3	4.8	5.8
	0.2	0.3	0.5
Repurposing pipeline	0.2	0.4	0.5
	0.3	0.5	0.6
	0.3	0.4	0.5
	0.4	0.5	0.6

**5 X**

Data source: European Hydrogen Backbone

### 2040: 53000 km pipeline (60% repurposing vs. 40% new pipeline)

Name	Length (km)	Year	Pressure(MPa)	Materials
Portugal, Spain and France - H2MED *	450	completed by 2030	2 million tonnes/year	Partly undersea
Germany: flow-hydrogen *	1100	operational by 2025	/	converting the gas pipelines
France	290	1966~	6.5~10	Carbon steel

\* is Hydrogen pipeline under planning

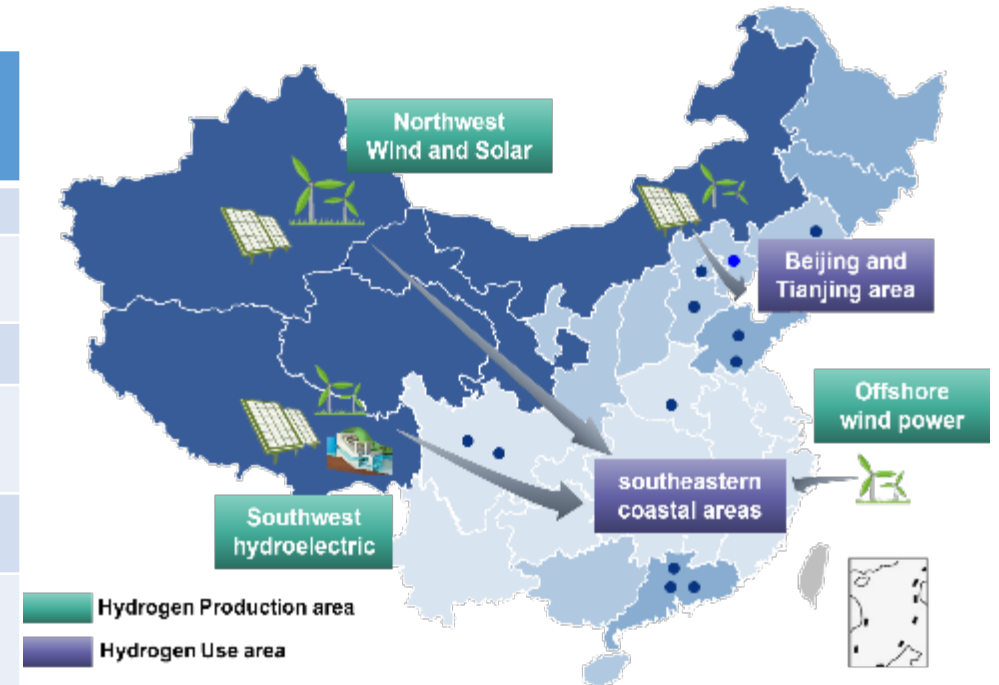

# Hydrogen pipeline in China

China's hydrogen pipeline construction is still in its infancy and is mostly used to supply hydrogen to chemical industries. More than **3,000km** of long-distance hydrogen pipelines are expected to be built by 2030.

Name	Length (km)	Diameter (mm)	Design pressure (MPa)	Pipeline materials
Jinling-Yangzi	32	325	4	20#
Baling-Changling	42	457	4	Cracked carbon
Jiyuan-Luoyang	25	508	4	L245 Seamless
Wuhai – Yinchuan*	217.5	610	3	L245 Longitudinal welded
Yima-Zhengzhou*	194	426	2.5	SM400C Spiral Weld
Inner Mongolia Ulanqab - Beijing Yanshan	400	In the design phase, the design conveying capacity is <b>100,000 tons/year</b>		

\* is Coal gas hydrogen blending transmission pipeline

**Low pressure, Low strength, Less experience**

**Hydrogen Transport from West to East**  
**Hydrogen Delivery from Sea to Land**

# Hydrogen energy requires a new generation of pipeline

- Shipping hydrogen by dedicated pipeline is not new all over the world, but the existing hydrogen pipeline infrastructure, the majority of which are **constructed from lower strength steels up to pressure of 4MPa**, is small compared to that of the natural gas and oil pipeline systems.
- The hydrogen pipeline network required to support a hydrogen-based energy strategy would **need to be much larger in diameter, higher in pressure and with much broader geographic reach** than that in place today.
- Establishing a national network of dedicated hydrogen pipeline infrastructure, or reconfiguring existing natural gas systems to carry hydrogen, **poses numerous challenges related to technology, regulation, siting, and economics**.

## *Key technical challenges of hydrogen pipelines*

- **Low cost, high strength, hydrogen resistant pipeline steel** are needed to reduce pipeline wall-thickness and thus reduce cost for construction
- Design Method in ASME B31.12 based on material performance factors, brings excessive conservatism and leads to higher costs and limits the transport efficiency of pipelines. **Design methods based on failure mechanism and material performance in hydrogen environment are needed.**
- How to effectively establish **the process parameters (such as hydrogen velocity etc) for hydrogen pipeline operations** given the substantial differences in physical characteristics between hydrogen and natural gas?
- Hydrogen compatibility of key equipment (e.g. valves, compressors, pipeline pigs);
- Due to the reduced flaw tolerance of pipeline steels in the presence of hydrogen, **advances in the detection, sizing and characterization capabilities of inspection may be needed**

## *Key challenges of high hydrogen content blends pipelines*

- The influence mechanism of gas impurities on hydrogen embrittlement is still unclear, and **the interaction of multi-component gases is rarely studied.**
- **How to evaluate the hydrogen compatibility of existing pipelines, especially welded joints?** The cost of extracting samples from CNG pipelines for destructive testing is too high, and the subsequent operation of pipelines will be affected
- **Technologies for hydrogen blending and separation**
- **Analysis of life-cycle greenhouse gas and criteria pollutant emissions of blending**
- **How to determine blend limit by comprehensively considering**
  - hydrogen compatibility of pipelines and equipment
  - functional reliability of equipment
  - applicability of pipeline network process
  - failure risks of pipelines leakage and explosion,
  - adaptability of terminal equipment replace of CNG with hydrogen

**Key technologies for long-distance pipeline  
transportation and application of hydrogen and  
hydrogen blended natural gas**

**Principle Investigator: Jinyang Zheng**

**Lead Organization: Zhejiang University**

**Implementing time: 2022.12~2026.11**

## Objectives

- **Develop science-based strategies to design the microstructure of high strength materials for improved resistance to HE.**
- **Develop damage mechanism-based design method, welding technology, risk management for hydrogen long distance pipeline.**
- **Develop a tool that evaluates the opportunities and costs of blending hydrogen into natural gas.**
- **Develop hydrogen blending and separation technology.**
- **A comprehensive test platform will be built for technical validation.**

# ISO/TC197/SC1/AHG2

ISO/TC197/SC1/AHG2 was activated to promote coordination of standardization on H<sub>2</sub> and high H<sub>2</sub> content blends pipelines.

## Targets:

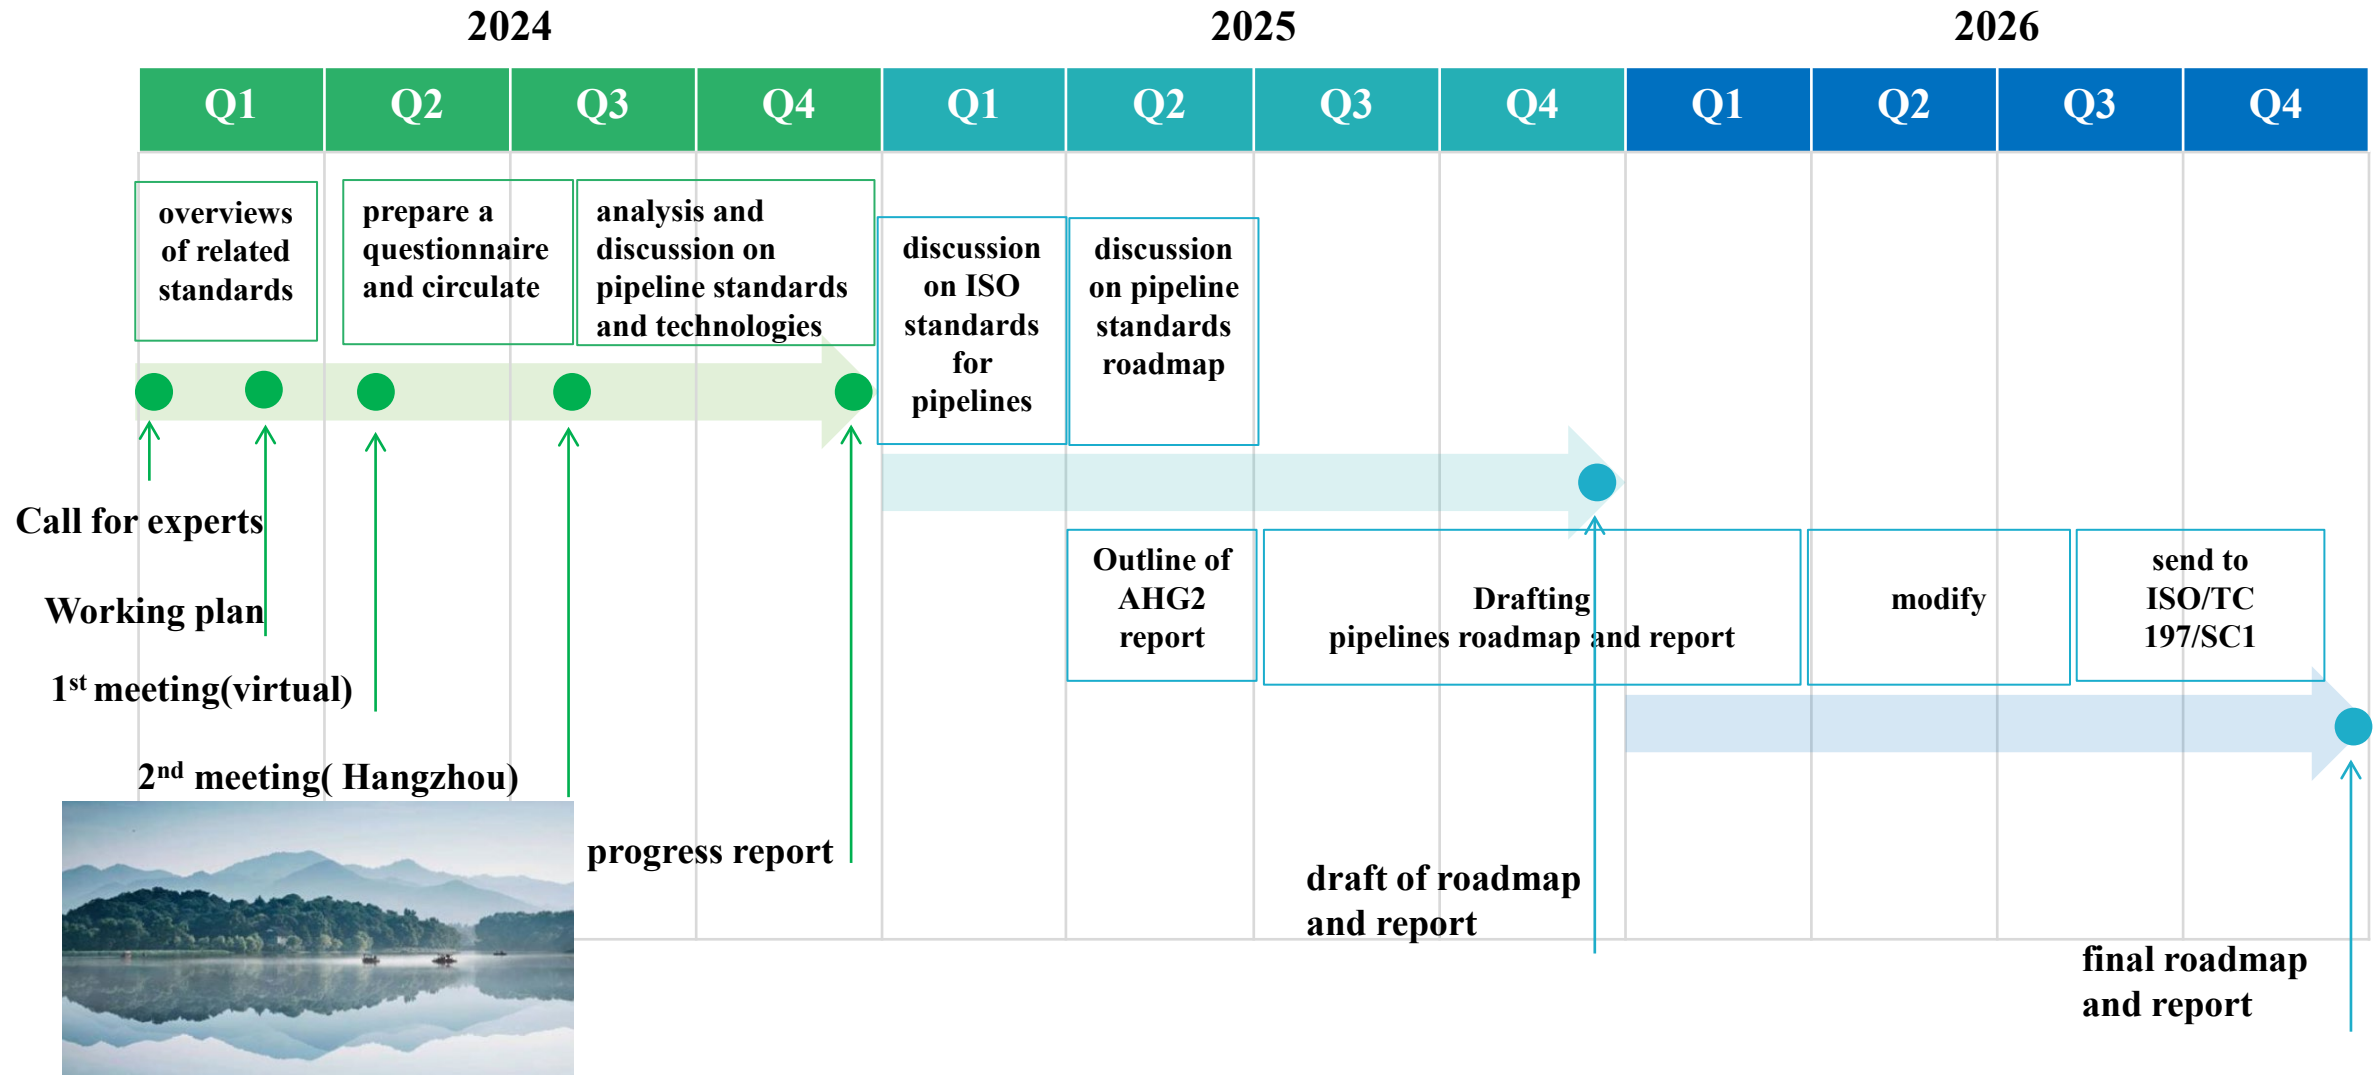

- (1) Discuss and research on literatures, technologies and standards for hydrogen and high content hydrogen blended natural gas pipelines, develop a report on state of the art and research priorities in hydrogen pipeline
- (2) Develop a roadmap for future hydrogen pipeline standards development

**Convenor: Prof. Jinyang ZHENG**

**Secretary: Dr. Yanmei YANG, Dr. Zhengli HUA**

**Experts(10): SAC x2, ANSI x2, DS(Danemark) x1, SABS(South Africa) x2, EIGA x1, DIN x1, JISC x1**

# Working Plan

## Current Progress

**Finished literature review of hydrogen pipeline**

**Finished survey of standard related to hydrogen pipelines**

Setters	Number	Title	Content
ASME	ASME B31.12–2023	Hydrogen piping and pipelines	H <sub>2</sub> and H <sub>2</sub> blend pipelines
	ASME STP-PT-006-2007	Design guidelines for hydrogen piping and pipelines	Design guidelines
CGA	CGA G-5.6-2005 (R2013)	Hydrogen Pipeline Systems	H <sub>2</sub> pipelines
AIGA	AIGA 033-14	Hydrogen Pipeline Systems	H <sub>2</sub> pipelines
DVGW	DVGW G 464	Fracture-Mechanical Assessment Concept for Steel Pipelines with a Design Pressure of more than 16 bar for the Transport of Hydrogen	Material Assessment
IGEM	IGEM/TD/1 Edition 6 Supplement 2	High pressure hydrogen pipelines	H <sub>2</sub> pipelines
ISO	ISO 13623:2017/DAM 1	AMENDMENT 1: Complementary requirements for the transportation of fluids containing carbon dioxide or hydrogen	H <sub>2</sub> blends pipelines

# Current Progress

Large movement has been made in the hydrogen pipeline industries. With the increase in pressure and transportation quantity, users of the current standards find that increased costs have not led to safer services. **It is necessary to find a way to balance between security and economics through technical innovation.**

## Current status

### **Excessive conservatism in design**

Material performance factor which are not technically justified

### **Non-specialized evaluation methods**

- 1 mile to extract samples for destructive testing;
- Over prescriptive sampling and testing requirements that are not risk or system based

## Gaps

### **Performance-based design method**

Based on material properties in the gaseous hydrogen or blends with pressure not less than operating pressure

### **Methods for assessment of repurposing natural gas pipeline for transportation of blends**

- Economical and safe sampling method;
- Establish a database for materials performance

### **No International Standard for hydrogen pipeline**

**Thanks for your attention !**
